

PROJECT	Continental Restaurant The Pier at Caesar's Atlantic City, NJ
DETAILS	SonaKrete Custom Color 1/2" Thickness 1,000 Sq. Ft.
ARCHITECT	Stokes Architecture Philadelphia, PA

SonaKrete at only 1/2" provides an NRC of .65. This achieves a lower installed cost than traditional 1" thick, sprayed acoustic plaster systems. The two standard colors of SonaKrete are White and Arctic White, however, virtually any custom color is available.

No matter what your design requirements and budget constraints, ICC's products can be customized to meet your needs. Restaurants, libraries, offices, hotels, and worship centers are just a few of the many types of projects in which SonaKrete can be utilized to provide an attractive acoustical treatment. For new construction or renovation projects, ICC's family of products offer the ideal ceiling treatment for any thermal or acoustical insulation need.

Project Architect Dave Fastiggi of Stokes Architecture knew in advance that there were going to be some unique acoustic challenges in the Continental Restaurant in Atlantic City, New Jersey. The original thought was to use acoustic panels for the noise control issues. However, the seams from the panels interfered with the smooth monolithic look they were trying to achieve in the restaurant. SonaKrete, a LEED Certified acoustic finish manufactured by International Cellulose Corporation, proved to be the exact solution to this design objective. The ability to be manufactured with an integral custom Sherwin Williams 6557 Wood Violet color made SonaKrete a logical product of choice for the curved walls and ceiling surfaces.

Contact International Cellulose Corporation today at (800) 444-1252 or visit us online at www.spray-on.com for complete details on how ICC can improve your building projects. ICC also offers architects an AIA/CES HSW SD Lunch N Learn program both live and on-line on the subject of Solving Architectural Noise Problems.
