Morris & Brown Architects
Reno, NV

ARCHITECT

K-13 Black
33,800 Square Feet
1 1/2" Thickness

The Peppermill Casino is a brand new facility located in Wendover, Nevada. This new addition is an expansion of the locations located in Reno and Henderson. In addition to the casinos, hotels and restaurants located within the complex, a decision to add a concert hall was made. The concert hall has

played host to various artists including: Merle Haggard, Clay Walker, REO Speedwagon and Jay Leno.

The interior roof deck received International Cellulose Corporations K-13 spray treatment on over 33,000 square feet, including 22,000 board feet of beams and trusses. The versatility of K-13 to conform to any surface configuration eliminates voids, gaps and compressions that can occur with prefabricated insulation. This monolithic coating results in the outstanding field performance of K-13.

K-13 black was chosen to match the interior color theme of the facility. This color is visually unnoticeable above the drop-down lights, and provides light control within various "mood-lit" settings commonly used during concerts.

With an 1 1/2" application of K-13 on the underside of the roof deck, an impressive NRC (noise reduction coefficient) of 1.00 was achieved. By directly reducing the reverberation time, K-13 is able to create an enjoyable environment for both entertainers and attendees.

K-13 is available in six standard colors: black, gray, light gray, tan and beige. Custom colors are also available to match any interior decor. Arenas, museums, libraries, worship facilities, gyms and restaurants are just a few of the many types of projects that benefit from K-13. Contact International Cellulose Corporation today at **(800) 444-1252** for complete details on how K-13 can improve your new construction and renovation projects -or visit our website at www.spray-on.com.
