

SonaSpray "fc"

Acoustical finish®

DESIGN SOLUTION

School

PROJECT	Van Buren Elementary School Caldwell, ID
ARCHITECT	LKV Architects 2400 East Riverwalk Drive Boise, ID 83706
DETAILS	SonaSpray "fc" Arctic White 40,000 Square Feet ¾" Thickness

Van Buren Elementary School is believed to be the first public school in Idaho to earn LEED Certification (Silver). Part of the certification involved the lighting design. The building is V-shaped and oriented to the east to capture as much sunlight in the classrooms and library as possible. This included leaving out the drop ceiling to make the ceilings higher.

International Cellulose's SonaSpray "fc" was a key part in the lighting design. In addition to providing an NRC of 0.80, the Arctic White color has a light reflectivity of 81% which helps brighten the rooms even more. SonaSpray also contributes in three LEED categories, re-cycled content (80% post-consumer), low VOC content adhesives (<20 gm/l) and has no added urea formaldehydes.

In addition to the superior acoustics and light reflectivity of SonaSpray "fc", the ICC family of products offer a wide range of benefits, such as, thermal insulation, durability, color options and condensation control. No matter what your design requirements and budget are, ICC's products can be customized to meet your needs.

Churches, restaurants, libraries, offices, hotels, and exhibit halls are just a few of the many types of projects in which SonaSpray "fc" can be utilized to provide an attractive acoustical treatment. For new construction or renovation projects, ICC's family of products offer the ideal ceiling treatment for any thermal or acoustical insulation need. Contact International Cellulose Corporation today at (800) 444-1252, or visit us online at www.spray-on.com for complete details on how ICC can improve your building projects.
