THERMAL & ACOUSTICAL SOLUTIONS WORSHIP

Ultimately, a worship center is about providing a place for people to come together and spread a message, making acoustic consideration key. All too often, sound systems are made a priority while the acoustics of the space are overlooked, effectively destroying benefits of any sound system. While worship projects can vary greatly in architecture, our acoustic treatments can address these issues.

CLASS A, CLASS 1

International Cellulose Corporation manufactures Class A, Class 1 Fire-Rated thermal and acoustical treatments in varying finishes to combat noise and reverberation, improving intelligibility in Worship Centers.

CUSTOM COLORS

Our cellulose-based exposed finishes are spray-applied and conform to virtually any properly prepared substrate or complex configuration, be it a historic building with high, arched ceilings or a repurposed metal building with metal decking and exposed ductwork. Also, all of our thermal and acoustical finishes are available in custom colors to meet any design goals.

SUSTAINABLE

Additionally, our products are sustainable. We manufacture our finishes from 80% recycled material and may contribute to satisfying credits under the LEED® green building program. Our products are UL GREENGUARD Gold certified and Factory Mutual Approved.

EXPERIENCE

With over 60 years in the industry, the worship projects highlighted in this brochure are just a small example of the many types of projects that have benefited from the acoustical and thermal finishes offered by International Cellulose. No matter what your design requirements and budget constraints are, for new construction or renovation, our products can be customized to help you create the ideal space.
