

PROJECT

Lamar-Dixon Expo Center
Gonzales, LA

DETAILS

Special Color SonaSpray[®] "fc"
212,000 Square Feet
½" Thickness

The Lamar-Dixon Expo Center in Gonzales, LA is a true multi-purpose event facility. Designed to host a wide variety of events including trade shows, horse and cattle shows, rodeos, and civic and community club activities, the center will be a welcomed edition to the community when it is completed in the fall of 2000.

Without SonaSpray "fc", reverberations created by the highly reflective metal surfaces would amplify noise to the point where announcements and music would be virtually unintelligible. Additionally, outside noise and rain noise beating on the roof would add even further to the noise problem. The ½" application of SonaSpray "fc" effectively eliminates these problems by providing an NRC of 0.65 on the metal deck.

SonaSpray "fc" also provides the expo center with several other improvements. Since it is spray-applied, SonaSpray "fc" covers the irregular ceiling with a monolithic coating. Com-

bined with the appropriate level of ventilation, SonaSpray "fc" helps to reduce the condensation that usually forms on metal buildings of this type.

Expo centers, passenger terminals, offices, libraries, gyms, schools and restaurants are a small selection of project types in which SonaSpray "fc" can be utilized to provide an attractive acoustical treatment. Contact International Cellulose Corporation today at (800) 444-1252 for complete details on how SonaSpray "fc" can improve your new construction and renovation projects.
