

PROJECT	Gather Boston, MA
DETAILS	K-13 Black 1.5" Thick
ARCHITECT	Hacin + Associates Boston, MA

Gather is a full-service, restaurant and bar located within District Hall in the rapidly expanding Innovation District. Gather offers an inventive, New American menu made from fresh, local ingredients, in a distinct environment that serves as a refuge from the fast-paced hustle of the surrounding area.

Gather was designed by Hacin + Associates who also designed District Hall. Concrete flooring, wood tabletops, a soaring ceiling, and numerous other hard surfaces required special attention to acoustics. To meet this challenge, a 1.5" application of K-13 Black was applied to the open truss ceiling.

K-13 absorbs unwanted echo and reverberation while enhancing ambient sound. In addition to acoustic performance, K-13 Black provides a dramatic backdrop to the eye-catching, suspended panel system, and endless strands of opulent pendant lights.

K-13 provides exceptional acoustic and thermal insulation and is a superior choice for your new construction or renovation project. It is available in standard and custom colors and can adhere to virtually any substrate configuration. K-13 is manufactured by International Cellulose Corporation, the industry's leading developer and manufacturer of spray-applied cellulose thermal and acoustical finishes.

Contact International Cellulose Corporation today at (800) 444-1252 or visit us online at www.spray-on.com for complete details on how ICC can improve your building projects. ICC also offers architects an AIA/CES HSW SD Lunch N Learn program both live and on-line on the subject of Solving Architectural Noise Problems.
