

PROJECT PROFILE

INDOOR POOLS

PROJECT

Highland Senior H.S.
California and 11th Ave
Natrona Heights, PA 15065

ARCHITECT

Hunter, Heiges, Sabo,
Douglas & Rogers
45 Reno St.
Sharon, PA 16146

DETAILS

K-13"fc" White
21,800 Square Feet
1" Thickness

The exceptional acoustic performance of K-13"fc" provides the Highland High School indoor pool with much needed noise control.

Without K-13"fc", the wide open area and reflective surfaces would amplify noise to the point where instructions and communication during swim practices and meets would be nearly impossible. One inch of K-13"fc" effectively eliminates these noise problems.

The K-13"fc" also provides the pool with several other improvements. Since it is spray applied, the K-13"fc" covers the irregular ceiling with a monolithic coating. Combined with the appropriate level of ventilation, K-13"fc" helps to reduce condensation in the pool area. In addition to outstanding acoustic and condensation control, the white K-13"fc" will provide the pool with a bright, attractive ceiling for years to come.

Whether for new construction or renovation, the K-13 family of products offer a wide range of benefits, including thermal insulation, acoustic control, lighting control, durability, aesthetics and color options. No matter what your design requirements and budget constraints are, K-13 can be customized to meet your needs.

Indoor pools, gyms, sports arenas and stadiums are just a few of the many types of buildings which benefit from the application of K-13 products. For complete details on how you can improve the acoustic, thermal, and visual performance of your facilities with the K-13 family of products, contact ICC today at **800/444-1252**.
