

DESIGN SOLUTION RESTAURANTS

PROJECT

Raffa's American Bistro
Kingwood, TX

DETAILS

K-13® Black
1.5" Thick
7,000 sq. ft.

Raffa's American Bistro is the first restaurant to open in the King's Harbor Waterfront Development located in Kingwood, TX. The interior is spacious with soaring 25 foot ceilings and 12 foot windows that overlook the water and the plaza. With this stylish architecture design and rooms that accommodate 160 patrons, it quickly became clear that they had an acoustical

problem. The owners needed an acoustical product that eliminates the reverberation and provides an attractive exposed ceiling. K-13 black was applied 1.5 inches thick to the ceiling area to provide an NRC of .90 and did not interfere with the architectural design.

K-13 is available in six standard colors: Black, Lt Gray, White, Gray, Tan and Beige. Custom colors are also available, call International Cellulose for details.

Churches, warehouses, restaurants, gymnasiums, retail facilities, sports facilities, and schools are just a few of the many types of projects that benefit from K-13. Contact International Cellulose Corporation today at (800) 444-1252, or visit us online at www.spray-on.com for complete details on how ICC can improve your building projects.
