

PROJECT	CBS Scene Patriot Place Foxboro, MA
DETAILS	K-13 Black 1" Thick 10,000 Sq. Ft.
ARCHITECT	Arrowstreet Somerville, MA

CBS Scene is a three-story, multimedia, interactive, bar and restaurant. The Scene was designed to engage guests in a multi-sensory experience that evokes the past, present, and future of CBS Broadcasting. This state-of-the-art facility features 147 high-definition displays and projectors. Each booth is equipped with an LCD screen and controller which allows guests to choose from over 20 channels. With so many channels playing at once, the acoustics were essential to fulfilling the media-centered concept. For that reason, Arrowstreet, the talented architects who made this

exciting project a reality, selected a 1" application of K-13. K-13 Black was the ideal choice as the restaurant is designed to look like a broadcast studio and news room. Metallic, globe shaped, hanging speakers were then installed to the ceiling to provide directional sound. This prevents sound from overlapping and maintains a quiet, consistent ambience at each table.

K-13 provides exceptional acoustic and thermal insulation and is a superior choice for your new construction or renovation project. It is available in standard and custom colors and can adhere to virtually any substrate configuration. K-13 is manufactured by International Cellulose Corporation, the industry's leading developer and manufacturer of spray-applied cellulose thermal and acoustical finishes.

Contact International Cellulose Corporation today at (800) 444-1252 or visit us online at www.spray-on.com for complete details on how ICC can improve your building projects. ICC also offers architects an AIA/CES HSW SD Lunch N Learn program both live and on-line on the subject of Solving Architectural Noise Problems.
