

SonaSpray "fc"

Acoustical finish®

DESIGN SOLUTION

School Facility

PROJECT	Centennial Hall University of Colorado Colorado Springs, CO
DETAILS	SonaSpray "fc" White 1" Thick 24,000 Sq. Ft.
ARCHITECT	Anderson Mason Dale 3198 Speer Blvd. Denver, CO

Centennial Hall was originally built in 1980 and in 2009 underwent a major renovation, which was completed in 2010. The facility houses class space for chemistry, biochemistry, anthropology and geography courses plus laboratories and faculty offices. In addition, Centennial Hall achieved its LEED certification, the fourth building on campus to attain LEED certification.

The lab spaces were left open to the structure above which was concrete-t construction. SonaSpray "fc" was applied at a thickness of 1" on the base of the tees and down the stems to control the reverberation from all the activities in the room. This also helps verbal communication between student and teacher.

Churches, restaurants, libraries, offices, hotels, and exhibit halls are just a few of the many types of projects in which SonaSpray "fc" can be utilized to provide an attractive acoustical treatment. For new construction or renovation projects, ICC's family of products offer the ideal ceiling treatment for any thermal or acoustical insulation need. Contact International Cellulose Corporation today at (800) 444-1252, or visit us online at www.spray-on.com for complete details on how ICC can improve your building projects.
